Assignment #7
"Team Script"

» » » » » » » » » » » » » » » »   DELIVERABLES

Collaborate in class and over Microsoft Teams to create a script for an animation to be completed by the entire cohort (working together) over the next three weeks. The script should include the following:

- A list of characters.

- A character sheet for each character, including information such as their personality, appearance, and background.

- A list of scenes.

- A description of each scene and the visual form it is meant to convey, including details that need to be included in detail.

- A script with the dialogue for each of the characters, camera instructions, and mood descriptions.

If a student is missing from class for any reason, their contribution to the collaborative effort will be graded based on their written responses over Microsoft Teams within 48 hours of the missed class. The basis will be that 625 words of feedback (not including script writing) will be equivalent to 1.25 hours of class time.

Animations are team efforts, and for good reason: working with a team allows us to accomplish more ambitious goals while also getting feedback, technical expertise, and support from others. In general, knowing how to work as a team in digital media fields is an invaluable skill.

A partial list of the animators who worked on *Lilo and Stitch* (2002); I was unable to fit the entire list in my browser view.
