Assignment #11
"Final"

» » » » » » » » » » » » » » » » » DELIVERABLES

Create an animation that appears complete by the conventional standards of TikTok. Your final video must include the following elements:

- Camera movement
- Audio
- Lip syncing
- An armature
- At least two scenes

TikTok requires videos to be 1920 pixels by 1080 pixels and to be no more than 15 seconds in length, so you will need to export your video in that format. You can use a horizontal or vertical aspect ratio, although vertical is more common on TikTok. You must upload the final rendered video and all of your original Toon Boom files to our Drive folder.

TikTok is a popular contemporary video sharing network. Our work this semester has covered all of the visual elements necessary to create visual animations that tell stories, like those on TikTok. Your video should include audio and textures/materials as necessary to help your viewers understand the story you want to tell; consider what someone seeing your video out-of-context would be able to read in it, and whether they would find it satisfying all by itself. The result does *not* need to be flashy or include advanced modeling elements, but it is fundamental that the animation tells a story.

Animators are finding a significant audience over TikTok, and it can be a way of networking with professional animators. Below is a sampling of TikTok videos with the hashtag #animation.
